

AI-powered Educational Counselling Platform

Social Inequality in Higher Education

Social Dimension: Following the Bologna process, German higher education has seen increased social stratification, disproportionately affecting students from disadvantaged and migrant backgrounds

Dropout Risks: Immigrant and working-class students face lower grades and a higher dropout risk, leading to increased chances of academic failure

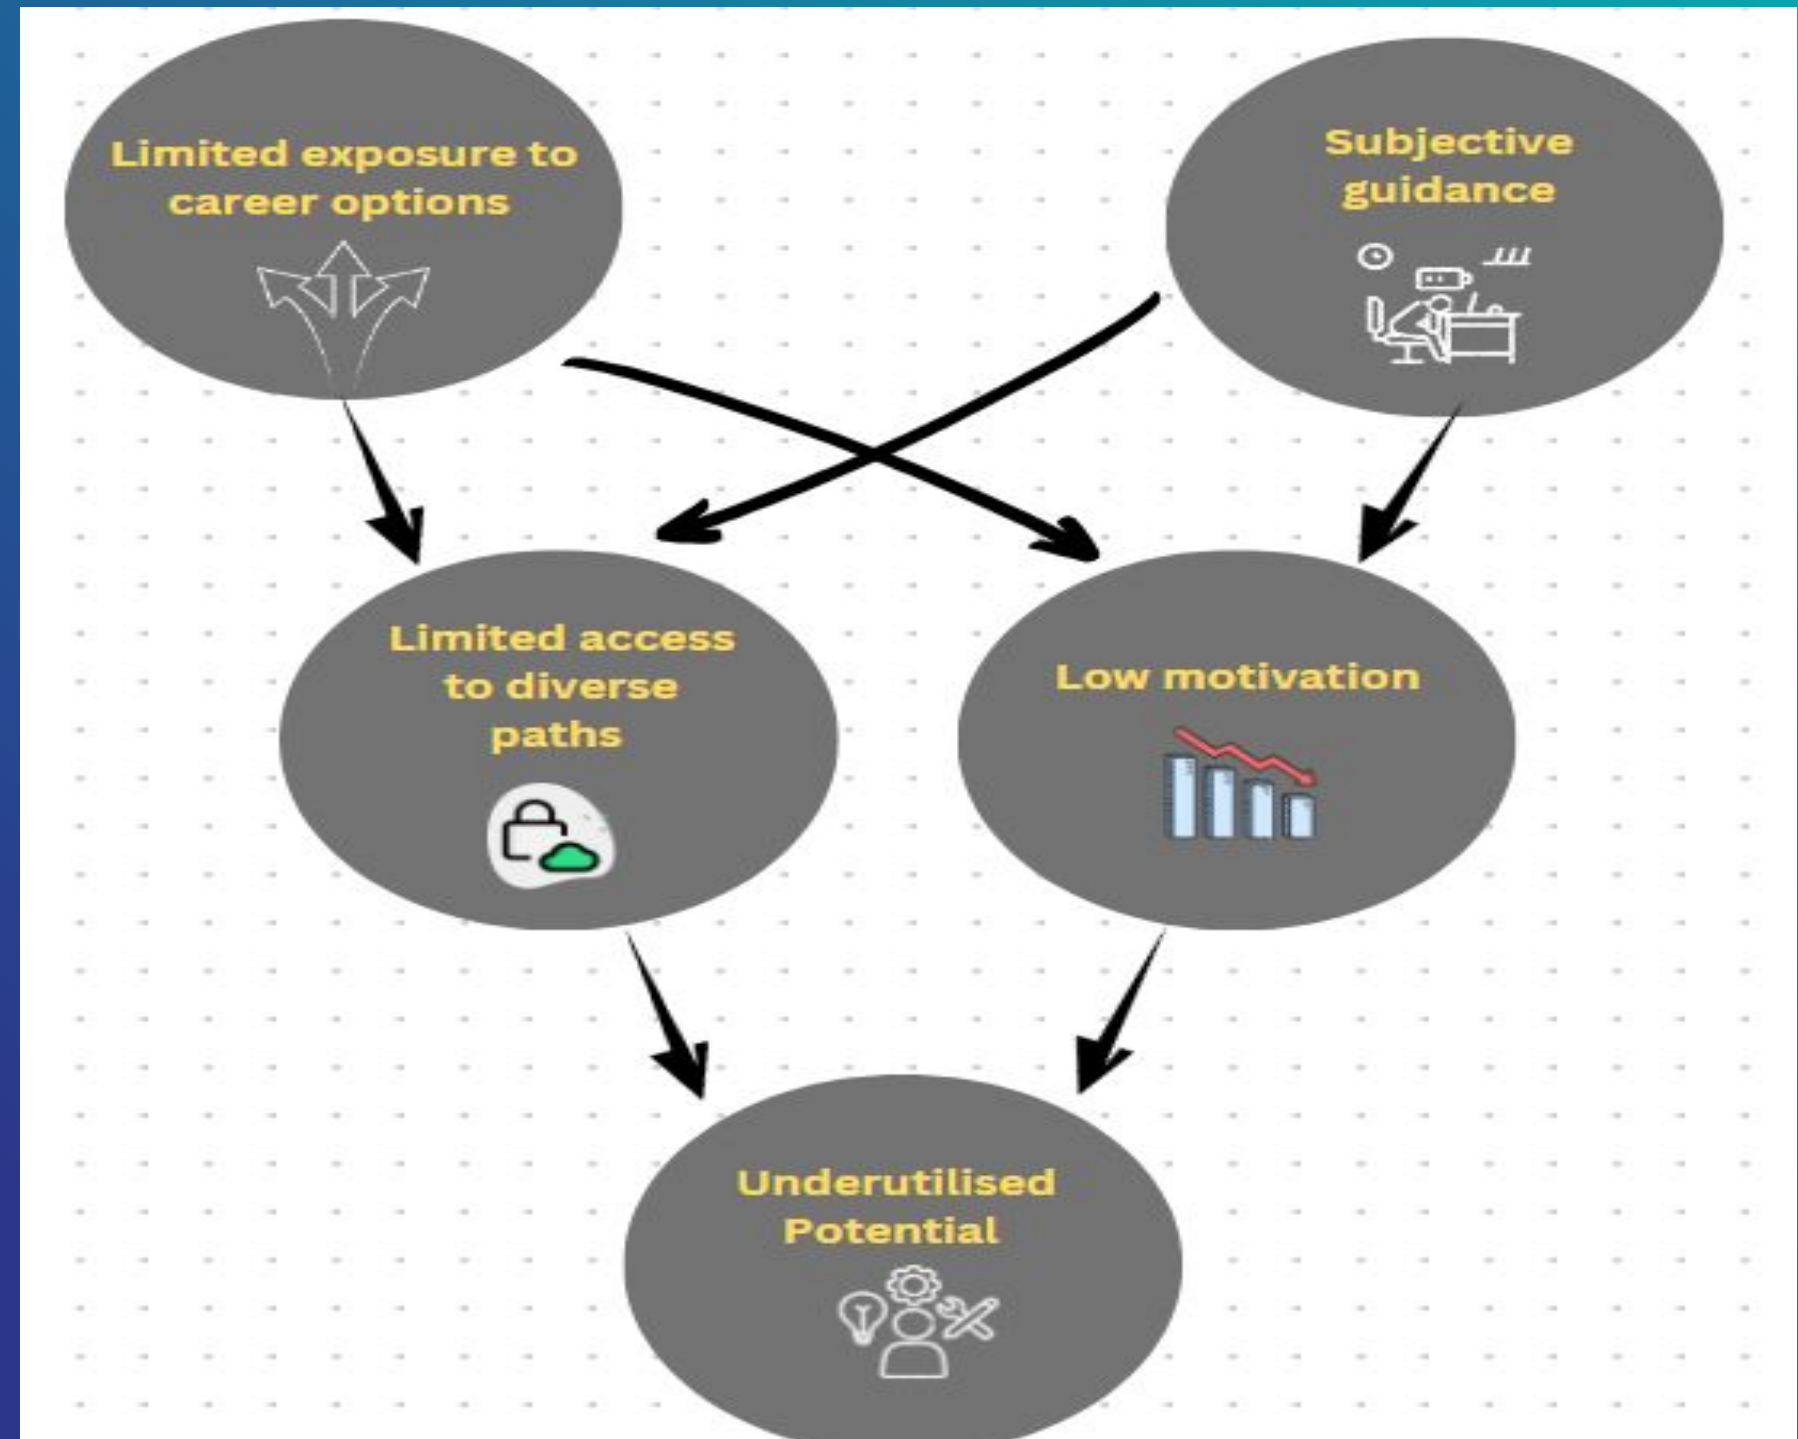

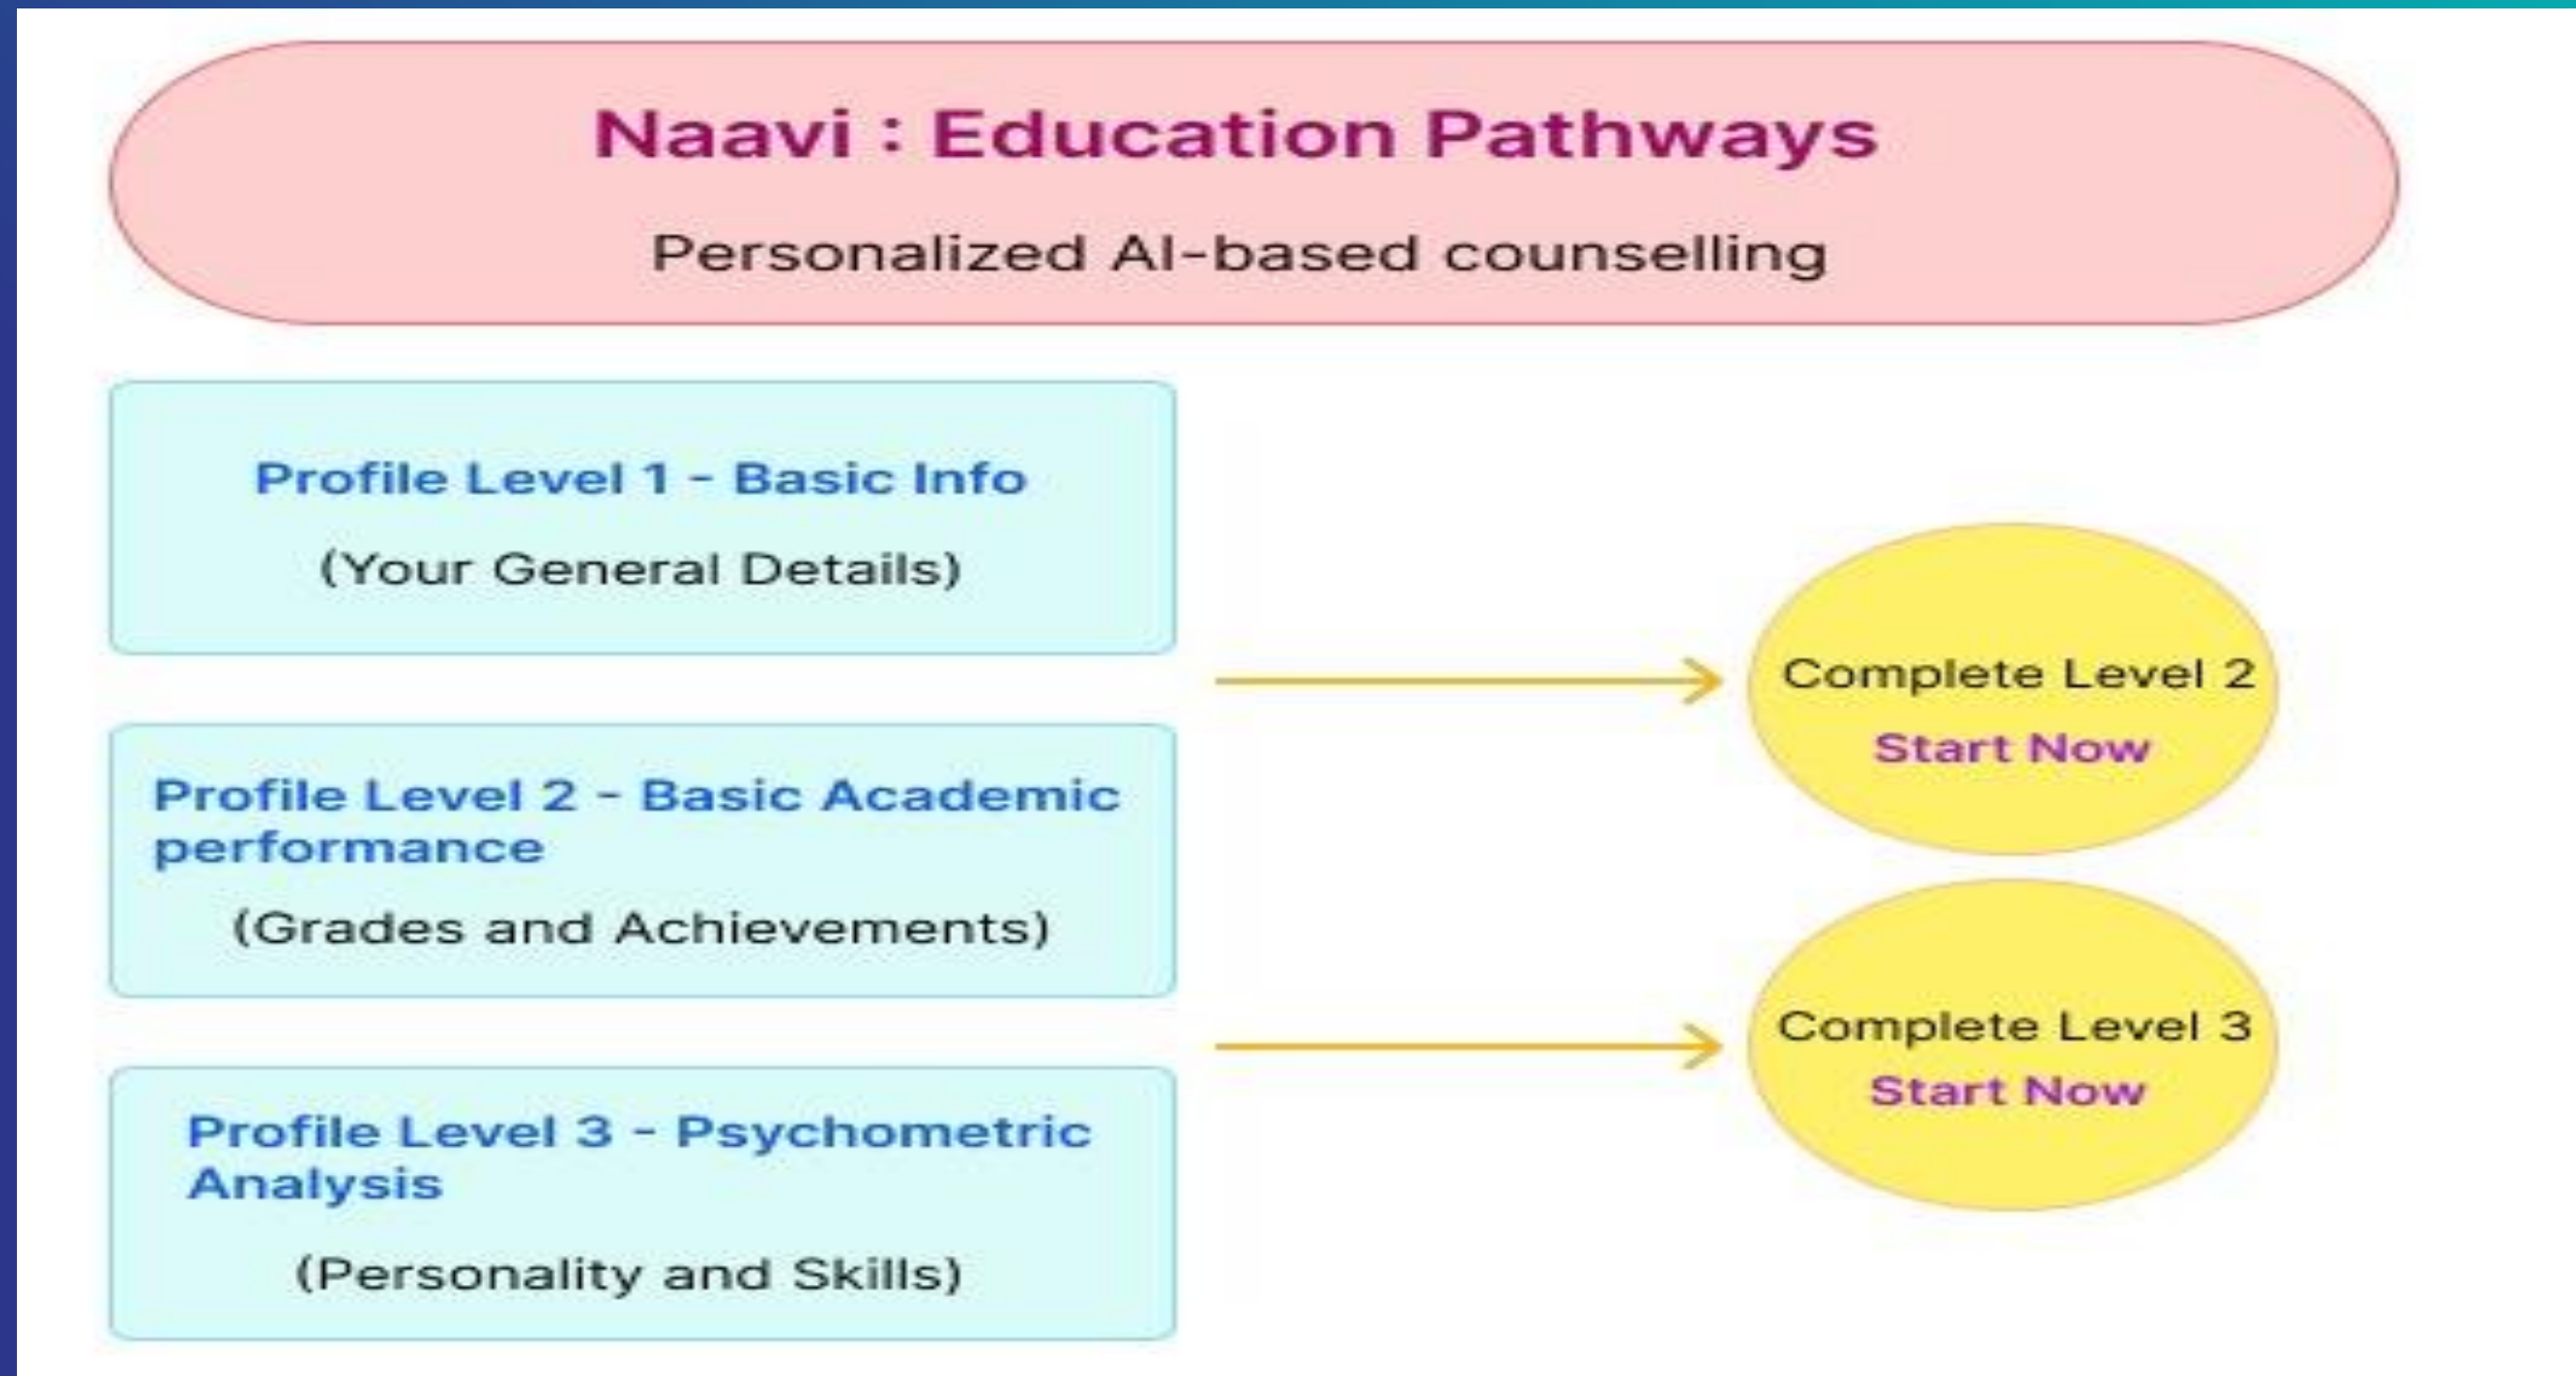

Decision Delusion Problem

Lack of personalised education pathways, students often choose generic study options

Many a students who do not fit the standard educational prospects, fall through the cracks

This situation leads to disengagement, low motivation, and mismatched careers

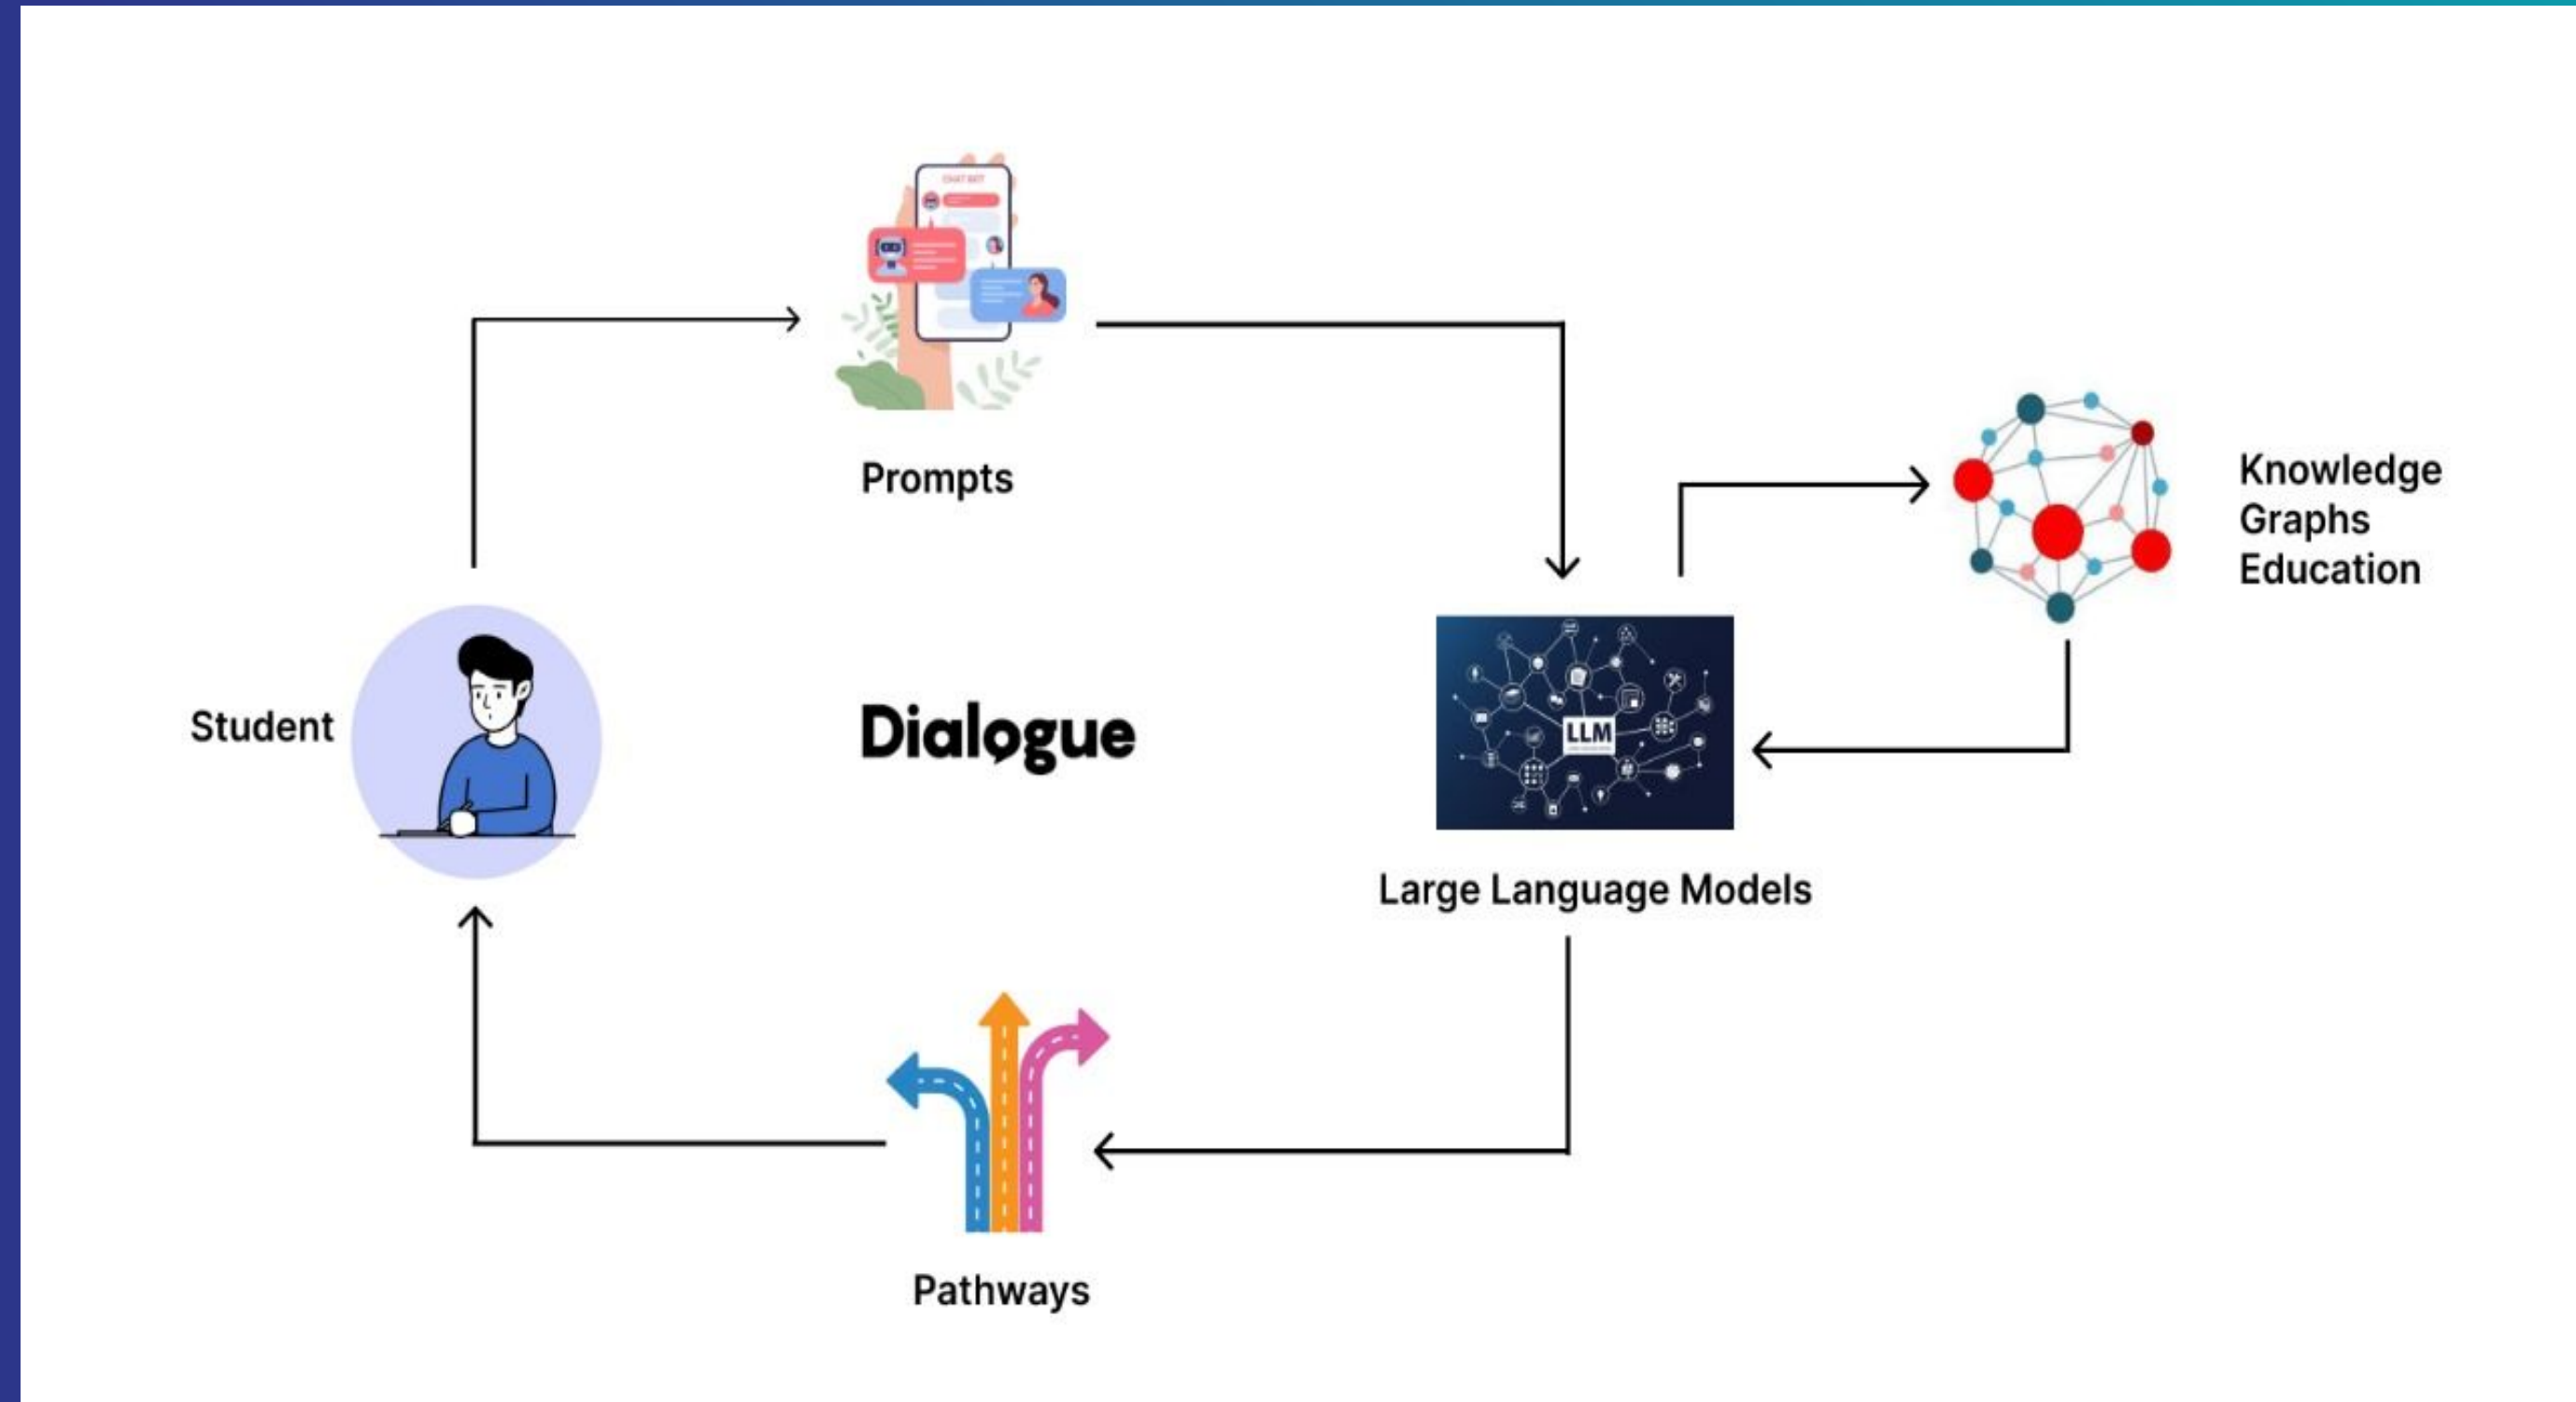

Focus Group: School Students aspiring for higher education

Generating multiple pathways each containing several steps with the aim to help them navigate the education landscape similar to Google Maps

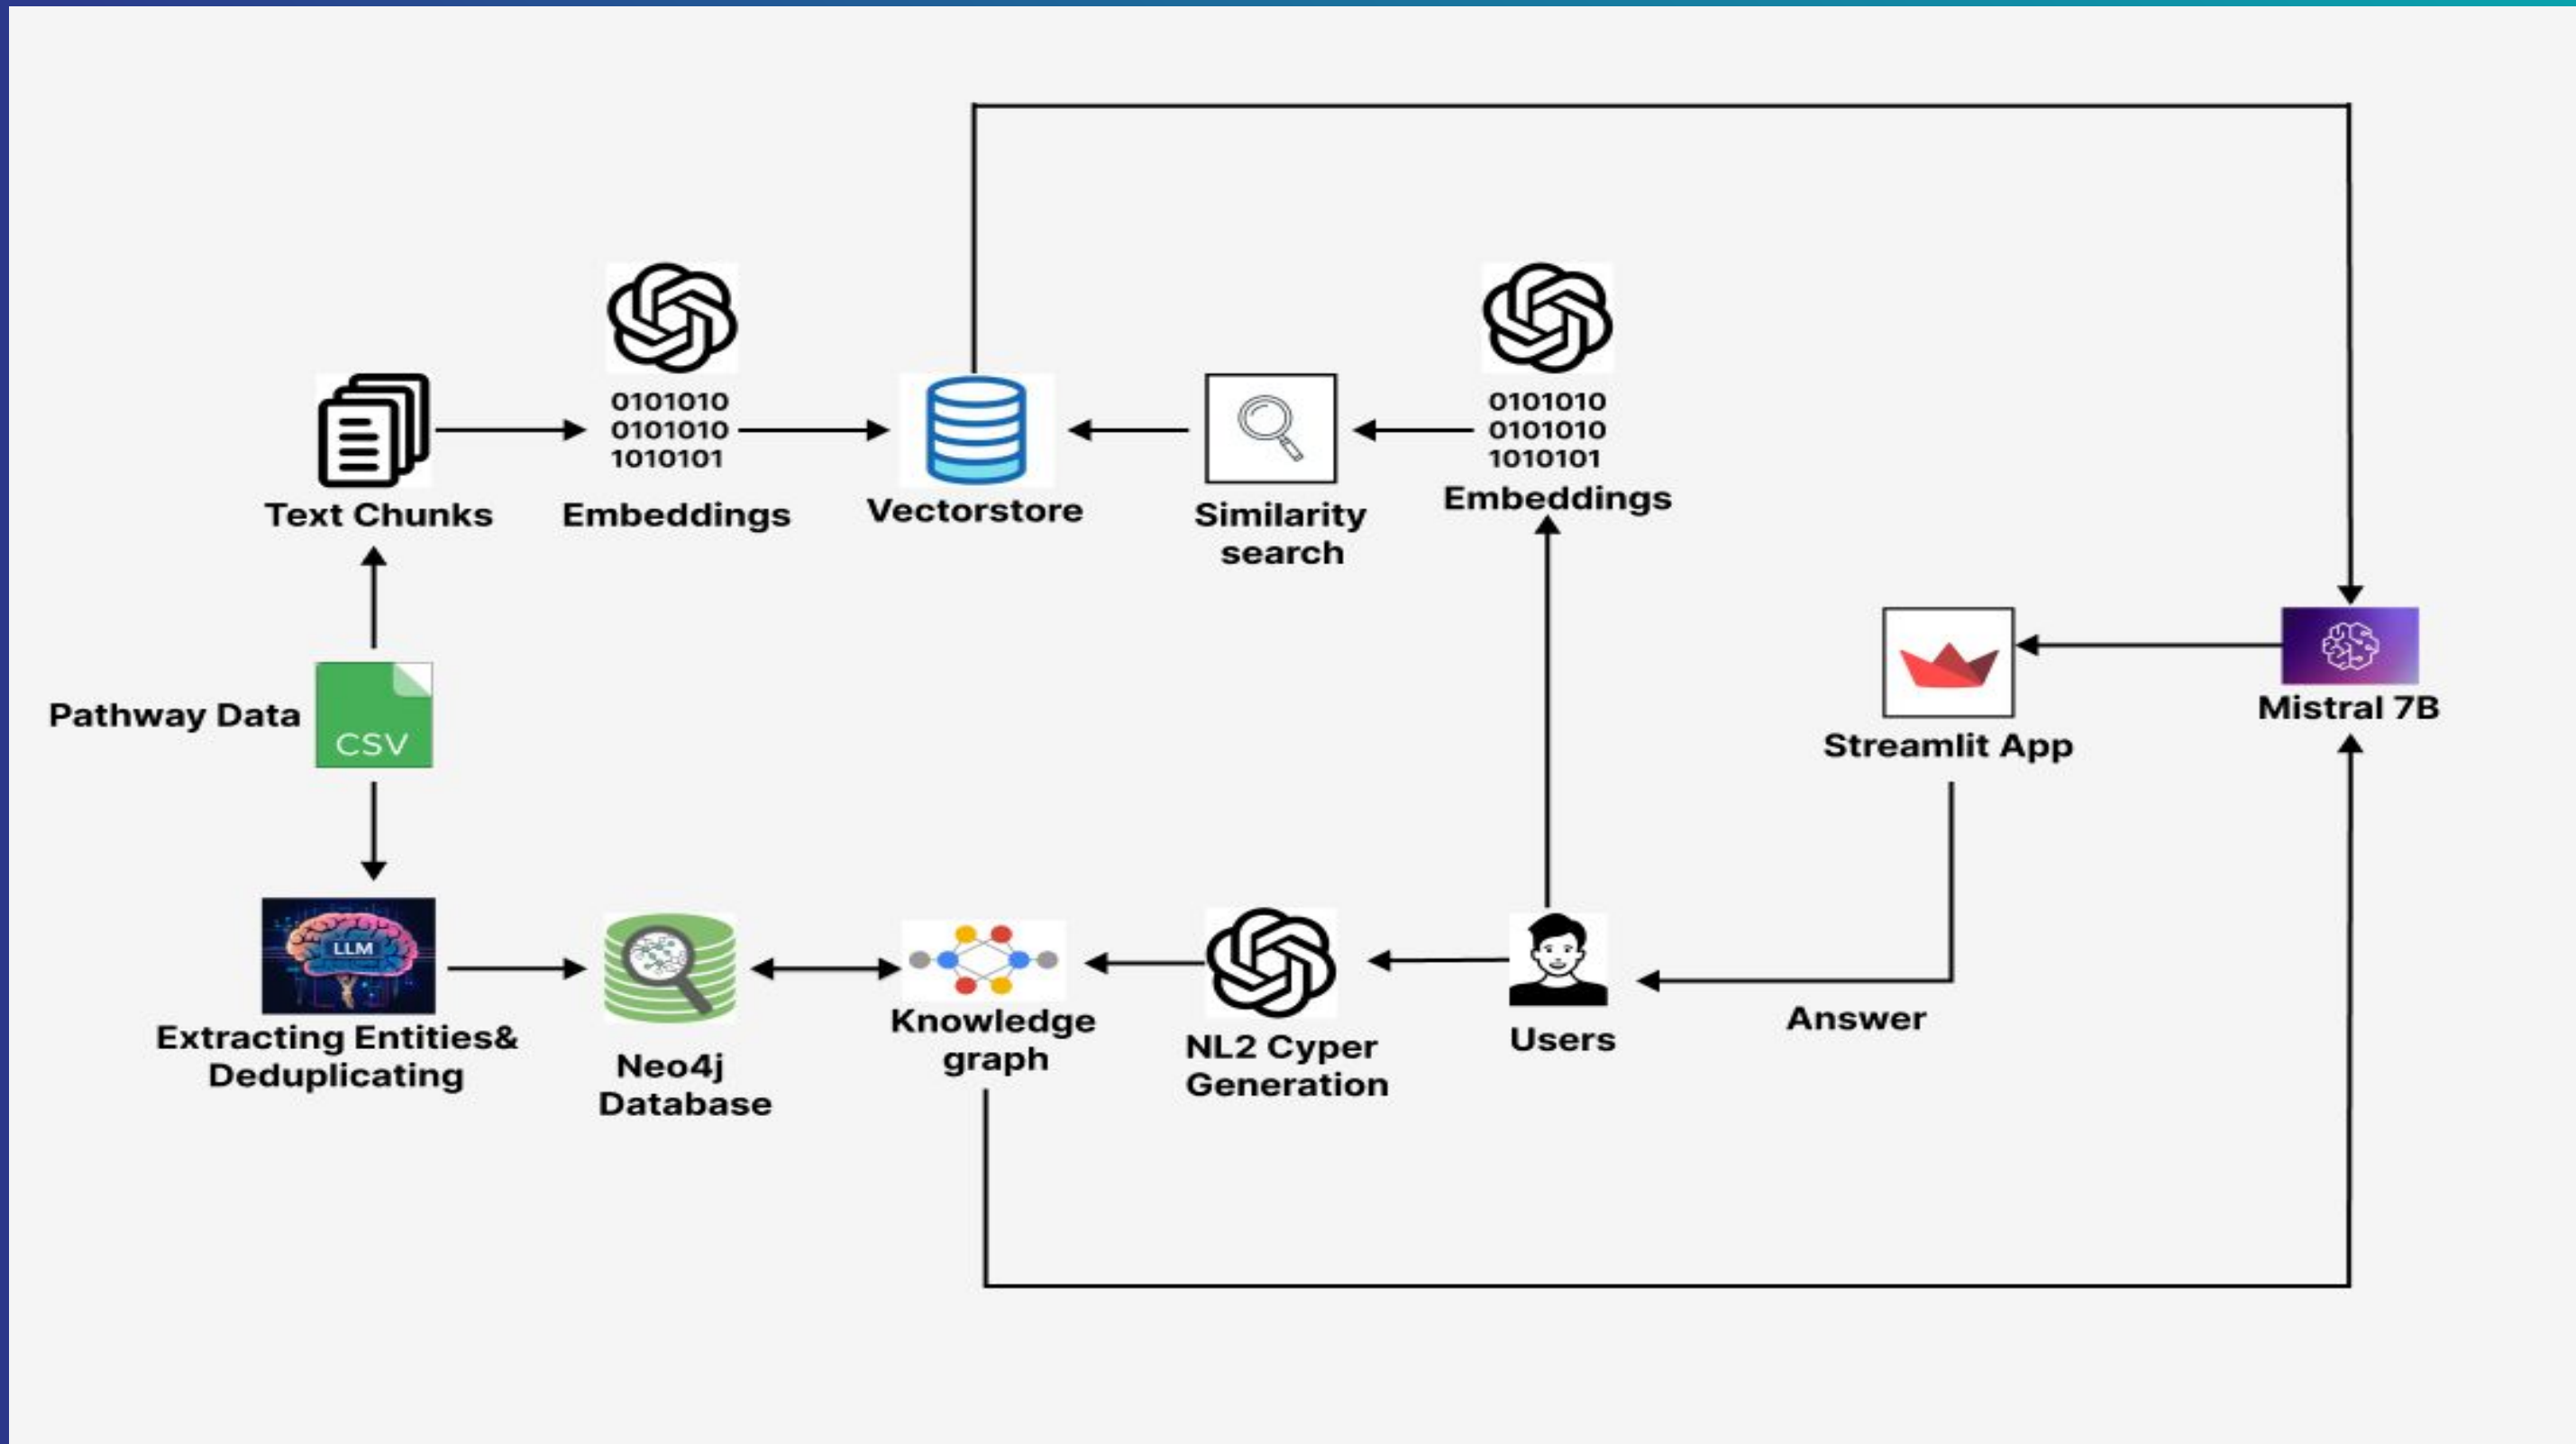

Generating Personalised Education Pathways

Students interaction with the Language Models

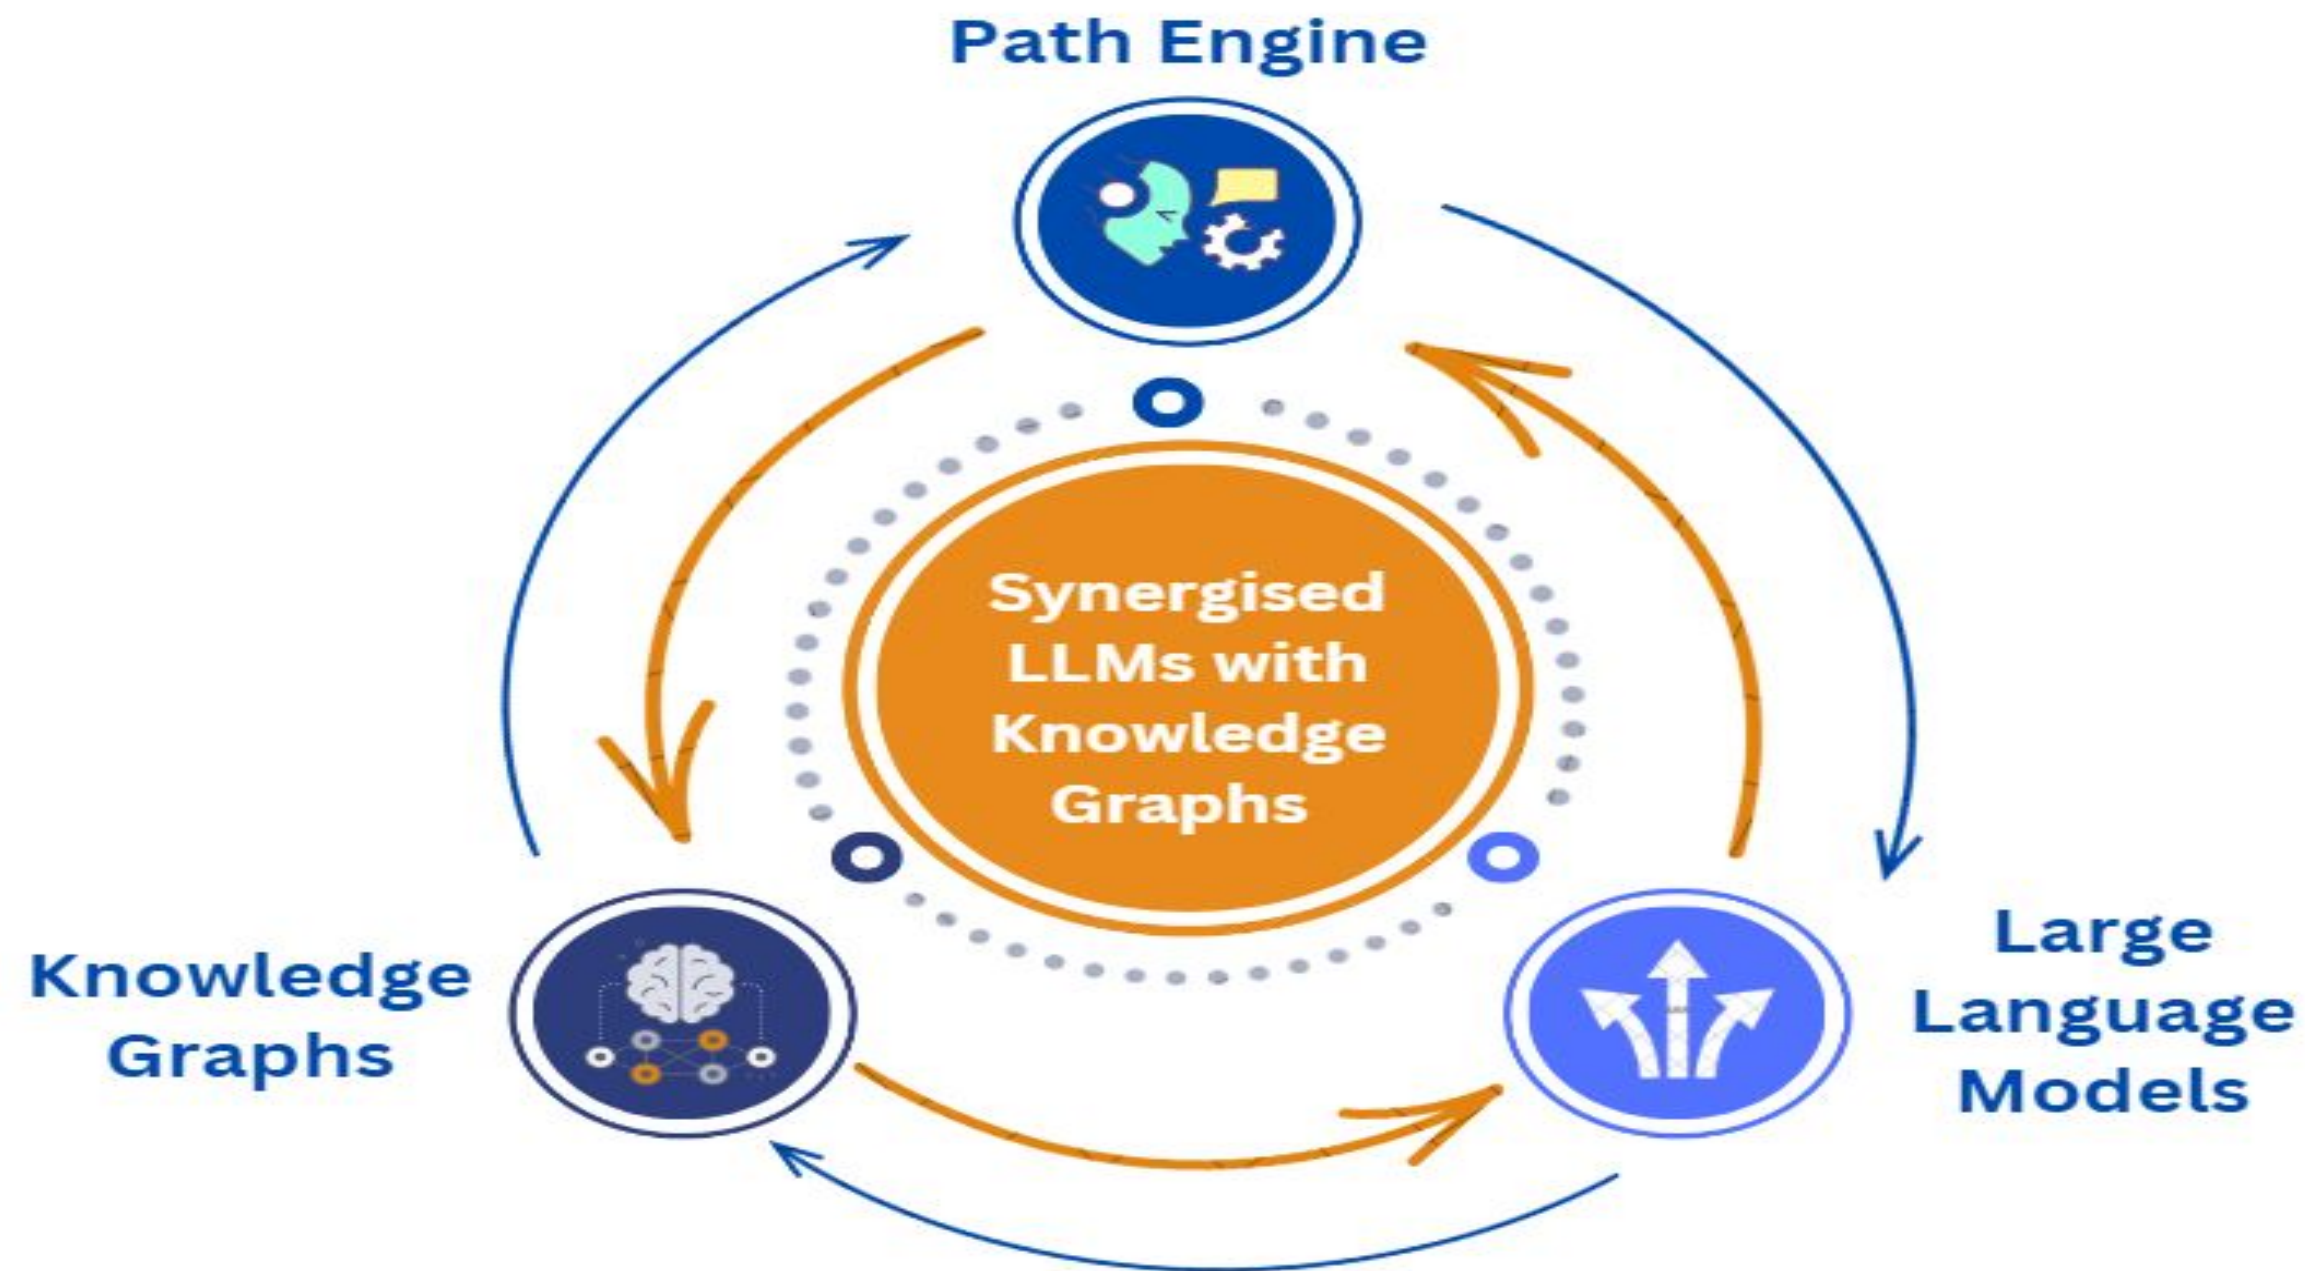

Knowledge Graphs enhanced LLM generation

Open-source LLMs: Llama 3/Mistral, Neo4j, Langchain, Ollama

Synergised Architecture

Unifying language models with KGs from perspectives of knowledge representation and reasoning on the data about pathways and counseling scenarios

Prime Positioning: Combining many advantages

Business Model

Target Channels: B2E & B2Gov
